

## Maximera antal svar i ett RSJoomla-formulär

För slippa hålla koll på när kursen är full kan du lägga in följande kod under Properties/PHP script, översta fältet:

```
// Definiera maxantalet svar. Detta exempel visar texten efter 10 anmälningar.
```

```
$max = 10;
```

```
// Get a database connection.
```

```
$db = JFactory::getDbo();
```

```
// Setup the query. This query counts the number of submissions for the current form.
```

```
// $formId contains the ID of the current form.
```

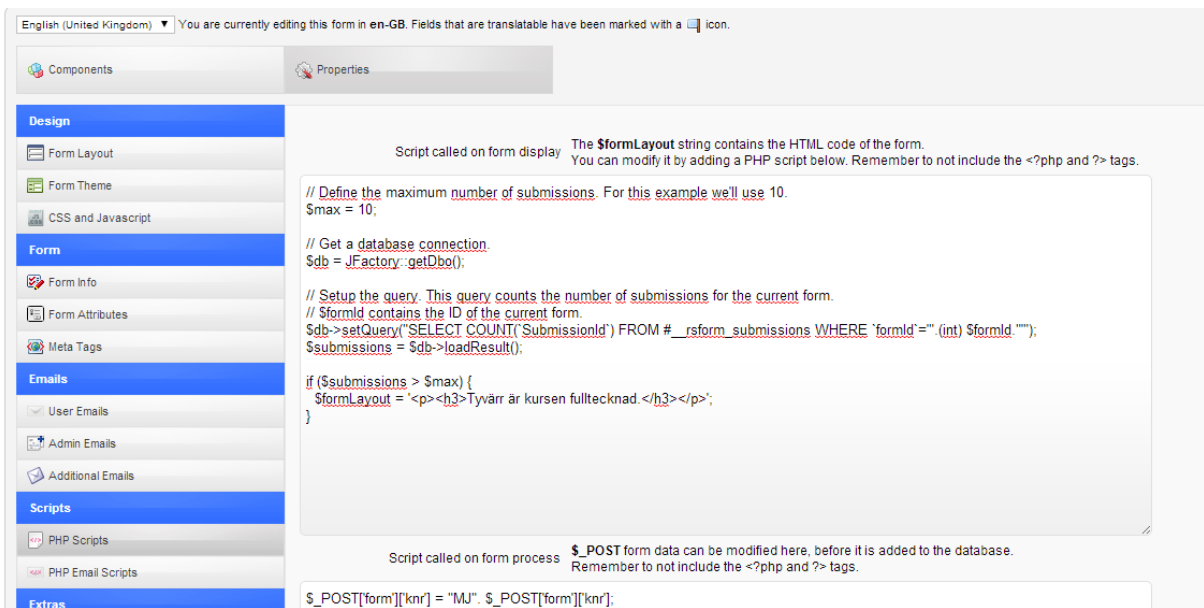

```
$db->setQuery("SELECT COUNT(`SubmissionId`) FROM #__rsform_submissions WHERE `formId`='".(int) $formId.'");
```

```
$submissions = $db->loadResult();
```

```
if ($submissions > $max) {
```

```
    $formLayout = '<p><h3>Tyvärr är kursen fulltecknad.</h3></p>';
```

```
}
```

The screenshot shows the Joomla! Form Builder interface. The left sidebar contains a menu with categories: Design (Form Layout, Form Theme, CSS and Javascript), Form (Form Info, Form Attributes, Meta Tags), Emails (User Emails, Admin Emails, Additional Emails), Scripts (PHP Scripts, PHP Email Scripts), and Extras. The main area is titled 'Properties' and contains two sections for PHP scripts. The top section, 'Script called on form display', includes instructions and the following code: 

```
// Define the maximum number of submissions. For this example we'll use 10.
$max = 10;

// Get a database connection.
$db = JFactory::getDbo();

// Setup the query. This query counts the number of submissions for the current form.
// $formId contains the ID of the current form.
$db->setQuery("SELECT COUNT(`SubmissionId`) FROM #__rsform_submissions WHERE `formId`='".(int) $formId.'");
$submissions = $db->loadResult();

if ($submissions > $max) {
    $formLayout = '<p><h3>Tyvärr är kursen fulltecknad.</h3></p>';
}
```

The bottom section, 'Script called on form process', includes instructions and the code: 

```
$_POST['form']['knr'] = "MJ". $_POST['form']['knr];
```
